General Description

* Description

8.9" LCD is a transmissive type color active matrix TFT (Thin Film Transistor) liquid crystal display(LCD) that uses amorphous silicon TFT as a switching devices. This model is composed of a TFT-LCD module - a TFT-LCD panel, a driver IC, a FPC, a PCB and a Back-light unit. The resolution of a 8.9" contains 1024 x 600 pixels and can display up to 262K/16M colors.

* Features

- Triple-Gate Technology applied
- Transmissive type
- WSVGA(1024x600) resolution
- LEDs Back-light
- Dot/Column Inversion mode
- 6 bits/8 bits LVDS interface
- ROHS

* Applications

- UMPC(Ultra Mobile PC) application products
- Mini PC
- Portable CNS(P-CNS) and PMP(Portable Multimedia Player)

* General Information

Items	Specification	Unit	Note
Display area	195.07(H) x 113.4(V)	mm	-
Driver element	a-Si TFT active matrix	-	-
Display colors	262K/16M	colors	-
Color Gamut	45	%	-
Number of pixels	1024(H) x 600(V)	pixel	-
Pixel arrangement	RGB Horizontal stripe	-	-
Pixel pitch	0.1905(H) x 0.0630(V) x RGB	mm	-
Display mode	Normally White	-	-
Viewing Direction	6	o'clock	-

* Mechanical Information

Item		Min.	Тур.	Max.	Unit	Note
	Horizontal(H)	213.06	213.36	213.66	mm	(1)
Module	Vertical(V)	129.25	129.55	129.85	mm	(1)
size	Depth(D)	4.85	5.15	5.45	mm	(1)
We	ight	-	160	190	g	(1)

Note (1) Back-light unit, mylar and PCB are included.

Doc . No	LTN089NT01	Rev.No	G008-080909	Page	4/27
----------	------------	--------	-------------	------	------

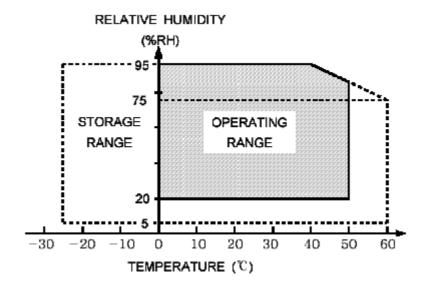

1. Absolute Maximum Ratings

1.1 Absolute Ratings of Environment

Item	Symbol	Min.	Max.	Unit	Note
Storage temperature	TSTG	-20	60	°C	(1)
Operating temperature (Ambient temperature)	TOPR	0	50	℃	(1),(2),(3)

Note (1) 90% RH Max. (40 °C \geq Ta)

Maximum wet-bulb temperature at 39 °C or less. (Ta > 40 °C) No condensation.

< Temperature & Humidity Graph at Absolute Environment >

Note (2) When operated at a temperature lower than 0° C, the LCD worked slowly and the screen appeared low-contrast images due to the characteristics of LC (Liquid Crystal).

Note (3) If any fixed pattern is displayed on LCD for minutes, image-sticking phenomenon may occur.

1.2 Electrical Absolute Ratings

(1) TFT-LCD Module

 $(Ta = 25 \pm 2^{\circ}C)$

Characteristics	Symbol	Min.	Max.	Unit	Note
Logic / LCD Voltage	VDD	2.7	3.6	V	(1)

Note (1) If used beyond absolute maximum ratings, the LSI may permanently be damaged. It is strongly recommended to use the LSI within the condition of electrical characteristics for normal operation. Exposure to a condition not within the electrical characteristics may affect the reliability of device.

(2) Back-Light Unit

 $(Ta = 25 \pm 2^{\circ}C)$

Characteristics	Symbol	Min.	Max.	Unit	Note
LED Current	Iι	-	30	mA	(2)

Note (2) Permanent damage to the device may occur if maximum values are exceeded or reverse voltage is loaded.

Functional operation should be restricted to the conditions described under normal operating conditions.

2. Optical Characteristics

The following items are measured under stable conditions. The optical characteristics should be measured in a dark room or equivalent state with the methods shown in Note (1), (2), (3).

* Measuring equipment: SR-3, BM-7, EZ-Contrast

 $(Ta = 25\pm2^{\circ}C, VDD = 3.3V)$

Item		Symbol	Condition	Min.	Тур.	Max.	Unit	Note
Contrast ratio		C/R	B/L on (aver. 5p)	250	500	-	-	(4) SR-3
Luminance o	of white	YL	I=20mA (aver. 5p)	170	200	-	cd/m2	(5) SR-3
NTSC Color S	aturation	-	B/L on	40	45	-	%	-
Response time	Rising:Tr Falling:Tf	Tr+Tf	Ф=0	ı	16	32	msec	(6) BM-7
	White	Wx Wy	$\theta=0$ Normal	(0.263)	0.313 0.329	(0.363)		
Color Chromaticity	Red	Rx Ry	Viewing Angle B/L On	(0.545)	0.595 0.345	(0.645)	- -	(7) SR-3
(CIE 1931)	Green	Gx Gy		(0.270)	0.320 0.555	(0.370)		
	Blue	Bx By		(0.100)	0.150 0.145	(0.200)		
Viewing	Hor.	qL qR	C/R≥10	40	(50) (50)	-		(8)
angle	Ver.	fH fL	B/L On	15 30	(25) (40)	-	Degrees	Ez-Contrast
White unif	White uniformity		(13points)	62.5	80	-	%	(9) SR-3

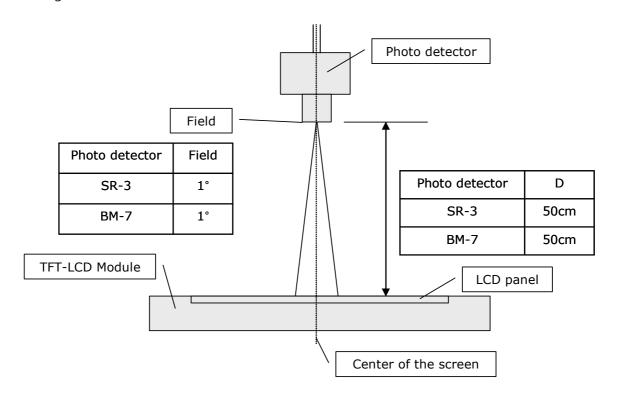

Doc . No LTN089NT01 Rev.No G008-080909 Page 7/27
--

Note (1) The optical characteristics is measured with Back-light.

- Note (2) If product is exposed to high temperatures for accelerated lift test or extended time, there is a possibility of the W/V polarizer film damage which could degrade the optical characteristics(Contrast ratio). But, Nothing is the matter in room temperature.
- Note (3) Test Equipment Setup for the Transmissive Mode (Back-light On)

 After stabilizing and leaving the panel alone at a given temperature for 30 sec,
 the measurement should be executed. Measurement should be executed in a stable,
 windless, and dark room. This should be measured in the center of screen.
 - Back-light Current : I₁=20 mA
 - Back-Light On condition

Note (4) Definition of Contrast Ratio (C/R): Ratio of gray max (Gmax) & gray min (Gmin) of 5 points of the panel. (4, 5, 7, 9, 10 of Note(9))

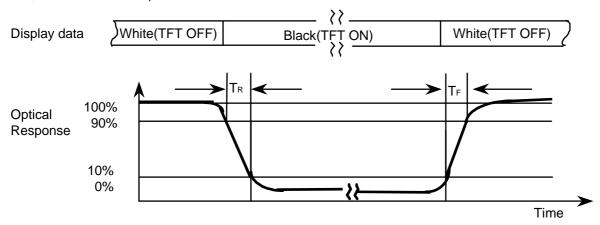

If Back-light is on state, it is the light source and the SR-3 will be used to measure.

Doc . No	I TN089NT01	Rev.No	G008-080909	Page	8/27

Note (5) Definition of Luminance of White: (Average) Luminance of white at 5 points. (4, 5, 7, 9, 10 of Note(9))

In this case, the incident light is not from the light source but from the Back-light that generates the reflected light source on LCD in the dark room.

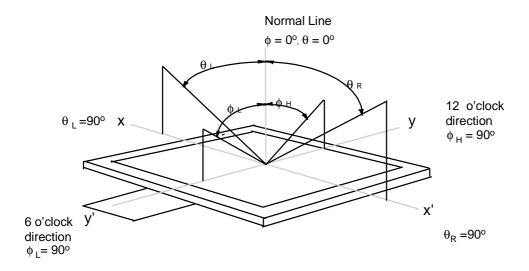

Note (6) Definition of Response time: Sum of Tr,Tf

Note (7) Definition of Color Chromaticity (CIE 1931), (Back-light: On)

It should be measured with standard light source or single rank of LED.

Note (8) Definition of Viewing Angle: Viewing angle range

Doc . No LTN089NT01 Rev.No G008-080909 Page 9/27

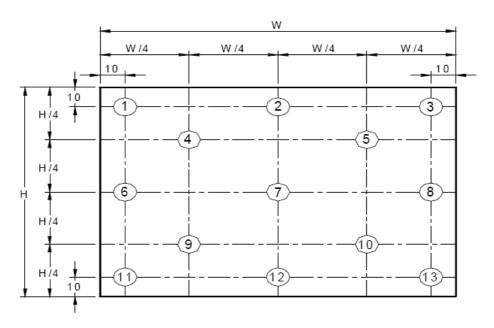

Note (9) Definition of Uniformity

White Uniformity (%) =

Min. luminance of white among 13-points

X 100-

< The spot locations for luminance measurement >

3.2 Back-Light Unit

The Back-light system is an edge-lighting type with 24 white LED(Light Emitting Diode)s. The characteristics of 24 white LEDs are shown in the following tables.

 $(Ta=25 \pm 2^{\circ}C)$

Characteristics	Symbol	Min.	Тур.	Max.	Unit	Note
LED Power Voltage	VLED	4.5	5	5.5	V	(1)
LED Power Current	ILED		380	420	mA	Input=5V
LED PWM Frequency	L _{freq}	-	-	1K	Hz	-

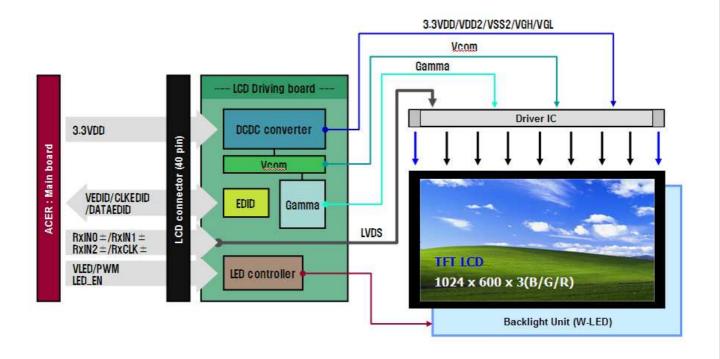

Note (1) The LEDs parallel type (Refer to 4.2)

T6	0	-	10	(ms)
T7	1000	-	-	(ms)

< Power Sequence timing >

- Note (1) The supply voltage of the external system for the module input should be the same as the definition of VDD.
- Note (2) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the Back-light turns off, the display may momentarily become white.
- Note (3) T4 should be measured after the module has been fully discharged between power off and on period.
- Note (4) Interface signal shall not be kept at high impedance when the power is on.

----------	------------	--------	-------------	------	-------

10. General Precautions

10.1 Handling

- (a) When the module is assembled, it should be attached to the system firmly. Be careful not to twist and bend the module.
- (b) Refrain from strong mechanical shock and / or any force to the module. In addition to damage, this may cause improper operation or damage to the module and back-light unit.
- (c) Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than a HB pencil lead.
- (d) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.
- (e) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (f) The desirable cleaners are water, IPA(Isopropyl Alcohol) or Hexane. Do not use Kepton type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- (g) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth . In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (h) Protect the module from static , it may cause damage to the Integrated Gate Circuit.
- (i) Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (j) Do not disassemble the module.
- (k) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (I) Pins of I/F connector shall not be touched directly with bare hands.

10.2 Storage

- (a) Do not leave the panel in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35°C and relative humidity of less than 70%.
- (b) Do not store the TFT-LCD module in direct sunlight.
- (c) The module shall be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during the store.

Doc . No	LTN089NT01	Rev.No	G008-080909	Page	26/27
----------	------------	--------	-------------	------	-------

10.3 Operation

- (a) Do not connect, disconnect the module in the "Power On" condition.
- (b) Power supply should always be turned on by the item 6.3. Power up sequence"

10.4 Others

- (a) The liquid-crystal is deteriorated by ultraviolet rays. Do not leave it in direct sunlight and strong ultraviolet rays for many hours.
- (b) Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- (c) Do not exceed the absolute maximum rating value. (the supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the panel may be damaged.
- (d) If the panel displays the same pattern continuously for a long period of time, it can be the situation when the image "Sticks" to the screen.
- (e) This panel has its circuitry FPC on the bottom side and should be handled carefully in order not to be stressed.
- (f) If product is exposed to high temperatures for accelerated lift test or extended time, there is a possibility of the W/V polarizer film damage which could degrade the optical characteristics(Contrast ratio). But, Nothing is the matter in room temperature.
